

This is the original hardcover publication of the medical classic of 1915 by J. Herbert Parsons, D.Sc, F.R.C.S., of the University College Hospital, Cambridge -- Dr. Parsons surveyed the literature on color vision, which largely consisted at that time of papers written in support of some particular theory. He separated the best established facts of colour vision known at that time from theories, and then discussed the chief theories in the light of these facts. ---
Contents: The Chief Facts of Normal Colour Vision - The Bases of Colour Vision - The Spectrum as Seen by the Light-Adapted Eye and by the Dark-Adapted Eye - Regional Effects - Temporal Effects - Areal Effects - The Evolution of Colour Vision --- The Chief Facts of Colour Blindness - Introduction: Colour Names - Dichromatic Vision - Anomalous Trichromatic Vision - Monochromatic Vision --- The Chief Theories of Colour Vision - Historical Review of Modern Theories - The Duplicity Theory - The Three Components Theory of Young and Helmholtz - The Opponent Colours Theory of Hering - Other Theories including those of Donders, Ladd & Franklin, McDougall, Schenck, Wundt, G. E. Mueller and Eldridge & Green. ---
